

AMENDMENT TO THE SPECIFICATION

Please cancel the previous amendment to the specification filed on 09/19/2008.

Please insert the following paragraph after paragraph [0016] under the heading “NOTATION AND NOMENCLATURE”:

The following terms as used throughout the following description and claims to describe particular system components are given the ordinary and customary meanings attributed to them by those of ordinary skill in the art. The term “server” as used herein means a computer or storage device on a network that that stores and makes access to data files, programs, and peripheral devices, available to workstations on the network. The term “client” means a computer or workstation on a network that gains access to central data files, programs, and peripheral devices through a server. The term “controller” also known as “control unit” or “processor” means the key component or part of a computer that contains circuitry necessary to interpret and execute instructions fed into the device to allow the computer to use certain kinds of peripheral devices and controls the transfer of data from a computer to a peripheral device and vice versa. The term “work station” means a computer terminal or microcomputer connected to a mainframe, minicomputer, or data-processing network, typically used for computer-aided design, electronic publishing, or other graphics-intensive processing. The term “proximate” means very near.
